

Assumptions

"Each authority has responsibilities for the streets in their local streets". We are assuming that the local authority can have access to many streets depending on total area attribute (not just 1).

We are assuming a street belongs to only 1 local authority (not specified in the case study).

Assumptions

"A property has several owners". Doesn't specify if owners can own many propertyts. Logically, we are assuming they can as this is not typically a restriction in the real world.

Assuming that a street can have 0 properties (as well as 1 or more).

Assumptions

Assuming that some bin_type and waste_type are newly added to the database; these types could potentially not be utilised by any bin (0 bins assigned).
